

(On macOS Catalina) [Allow access to files and folders] for rekordbox.

Q

After updating to macOS Catalina 10.15, I can no longer play music files shown on the track list of rekordbox.

A

On macOS Catalina, app cannot access folders to which they have not been allowed access.

If music files on the track list of rekordbox are indicated as non-playable, or external devices are no longer displayed in [Devices] of TreeView, open [System Preferences] > [Security & Privacy] > [Privacy]tab > [Files and Folders] on Mac and checkmark all the rekordbox items.
