Introduction

rekordbox can manage music files, and allows you to play music files by using Pioneer DJ multi-player or DJ system.

- Create playlists for different scenes, by classifying and searching for music files stored on your computer.
- Analyze tracks - detect the key, edit beats and tempo (BPM), and collect other important information about your music files prior to your performance.
- Set and store point information (for cueing, looping, hot cueing, etc.) prior to your performance.
- Record your DJ performance or analog sound input through the connected device.

rekordbox allows you to use created playlists and various point information for your DJ performance. Also, you can record your DJ performance including improvised cue and loop points information to review and make use of your DJ performance history for next DJ performance.

Additionally, rekordbox can support your DJ performance by using effect functions, samplers, and other functions of the DJ application, as well as provide support for lighting productions. You can also use advanced features, such as Digital Vinyl System, video performance, additional effects, lyrics visualization, optionally.
